

ABSTRACT OF THE DISCLOSURE

The present invention is directed to a qualification method for testing a radio communication system including a plurality of radio terminals. The method includes providing a representative terminal having a machine type identical to a machine type of the plurality of radio terminals, and executing a qualification test on the representative terminal so as to determine whether or not the representative terminal can be used in a desired radio communication system from a plurality of radio communication systems. The method also includes receiving a test success message indicating that the representative terminal passed the qualification test, and notifying the test success message to the plurality of radio terminals. The present invention also relates to a computer program product and apparatus for performing the qualification test.
